Scopus makes millions of open access articles easily discoverable

Submitted by Rachel McCullough on Tue, 12/04/2018 - 01:44

With Elsevier's recent partnership with Impactstory, a nonprofit that creates online tools to make science more open and reusable, researchers are now able to discover millions of peer-reviewed open access (OA) articles with ease.

Making open access (OA) content more accessible

The OA movement has made it possible for scientific research to become more widely available. But while OA articles are free to access, they are not always easy to find. Scopus users have been able to locate OA content by filtering results for articles published in journals designated as open access, but now that scope has been significantly widened.

Access nearly 8 million OA articles on Scopus

Scopus has now broadened users' ability to discover open access content thanks to a new partnership with Impactstory, a nonprofit that develops online tools to promote open science. Document-level OA data from Impactstory's Unpaywall database is now integrated with Scopus content, increasing the amount of OA-tagged content in Scopus to nearly 8 million records and counting.

PlumX API for Scopus Customers

Now available on dev.elsevier.com

29.01.2019

PlumX API for Scopus Customers now available

- New PlumX API provides an additional set of metrics for Scopus subscribers to tell a more complete story about the impact of their research outputs.
- When Scopus customers pass an identifier to the API, they will receive a set of metrics for that research output such as usage, captures, mentions, and social media.
- This API signifies Elsevier taking another step towards meeting the increasing demand for a broader set of research metrics to enable researchers, institutions, and funders with custom reporting capabilities.
- More information about this API can be found here on the dev site:
<https://dev.elsevier.com/documentation/PlumXMetricsAPI.wadl>

Institution Profile Wizard (IPW)

Times Higher Education (THE) to send a second endorsement of IPW on Monday, December 17th

29.01.2019

Institution Profile Wizard (IPW)

Times Higher Education (THE) will be sending a second endorsement of IPW on Monday, December 17th (first endorsement was sent in June)

The process by which we handle incoming requests for IPW will stay the same, but **note that you may see an increase in requests for IPW.**

Times Higher Education Email (December 17)

THE WORLD UNIVERSITY RANKINGS

Dear [Contact name],

The *Times Higher Education* World University Rankings lists the best global universities and are the only rankings to judge world-class universities across all of their core missions - teaching, research, knowledge transfer and international outlook.

We would like to invite your institution to submit data for the next year's cycle of the *Times Higher Education* World University Rankings. The ranking published in September this year included 1,258 institutions from 86 countries and generated a huge amount of interest around the world. We intend to provide the same level of global exposure for universities this year by launching our next World University Rankings in Autumn 2019, but to do this we will need your help.

We use three sources of information to compile the *Times Higher Education* World University Rankings. These are:

- Institutional Data supplied directly by higher education institutions using our secure Data Collection Portal (more details below).
- Bibliometric Data sourced from our partner Elsevier from their bibliometric database 'Scopus' (more details below).

Scopus Institution Profile Wizard

Submitted by Rachel McCullough on Fri, 08/08/2018 - 10:48

We are excited to announce a new tool, the Institution Profile Wizard, now available on Scopus.

The Institution Profile Wizard allows institutions to modify their affiliation profiles and correct their organizational hierarchies to ensure the correct set of affiliation profiles are grouped together and displayed on Scopus.

As Scopus institutional publication data is included in various ranking methodologies (e.g. Times Higher World University Rankings, QS World University Rankings), this development will allow for greater accuracy when reporting institutional data. Scopus publication and citation data also powers Scholar.

To get started, please fill out and submit this form. This will allow us to connect you with your local Scopus account team.

Last Name*

Work Email Address*

Work Phone*

Job Title*

Anyone who requests access to IPW - Scopus subscriber or non-subscriber - will submit a lead generation form and it will become a lead in Salesforce.

Do not reject the leads coming from Scopus subscribers

All requests for IPW access to come into Salesforce as leads

- Note that the process for IPW requests remains the same. A lead will be created and should be handled as usual.
- For Scopus subscribers, there will be a note in the lead indicating that it is a Scopus subscriber that is interested in accessing IPW.
 - Do not reject these leads
- Instead the Research Intelligence Customer Consultant should contact the individual about gaining access to IPW.
- Email Template - Explaining IPW Authorization
- IPW Authorization Letter
 - Note that as of Jan 1, you/your customer will be able to upload these authorization letters to the Scopus Support Hub (instead of emailing them to affiliationfeedback@scopus.com)
 - We will send a reminder closer to the date

CiteScore

Recalculation for a small proportion of sources

CiteScore: Recalculation for a small proportion of sources

- In May 2018 the CiteScore values for 2017 were released for more than 23,000 sources.
- Since then, we have received feedback from CiteScore users on a small proportion of sources which prompted an evaluation of potentially missing documents and citations in our original calculations.
- Our review identified 128 sources for which a new 2017 CiteScore was calculated in December 2018 on the basis of corrected underlying data, but otherwise reflecting the Scopus database as of May 2018.
- [Click here](#) to learn more information on the correction and recalculation process
