

CURRENT THERAPEUTIC RESEARCH

REVIEW ARTICLES AND META-ANALYSES

Comprehensive evidence-based reviews, systematic reviews, and meta-analyses of the literature are welcomed. Authors should contact the editorial office to discuss the topic area to avoid duplication with previously submitted or accepted manuscripts at <mailto:currtherres@elsevier.com>. For more information about what constitutes a good review, see the PRISMA statement (<http://www.prisma-statement.org/index.htm>), CD Mulrow (The medical review article: State of the science. *Ann Intern Med* 1987;106:485-488) and AD Oxman et al. (User's guide to the medical literature. VI. How to use an overview. Evidence-based medicine working group. *JAMA* 1994;272:1367-1371). The review should include an accurate, succinct title; a structured abstract; an introduction that specifies the purpose of the review; methods section that identifies the databases that were searched, search terms used, and inclusion/exclusion criteria for identified articles; an assessment of the validity of reviewed studies; and a summary that includes future directions for studies in this area. Each study mentioned in the review should include the study design, a description of the study population (age range, disease/severity), the dose and duration of each treatment administered, and the data and P values to support any mentions of significant findings.

Abstract: 300 words

Text: 5500-6000 words

Acknowledgements

Collate acknowledgements in a separate section at the end of the article before the references and do not include them on the title page, as a footnote to the title or otherwise. List here those individuals who provided help during the research (e.g., providing language help, writing assistance or proof reading the article, etc.).

Conflict of interest

At the end of the text and preceding the references section, under a subheading "Conflict of interest statement" all authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their work.

Examples of potential conflicts of interest include employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications/registrations, and grants or other funding. Authors should declare the role of study sponsors, if any, in the study design, in the collection, analysis and interpretation of data; in the writing of the manuscript; and in the decision to submit the manuscript for publication. If the study sponsors had no such involvement, the authors should so state. As a guideline see the ICMJE form for disclosure of Potential Conflicts of Interest at: http://www.icmje.org/coi_disclosure.pdf In order to maintain the double blind peer review process, we recommend that first and last initials are used in place of author names within this section.

Units

Follow internationally accepted rules and conventions: use the international system of units (SI). If other units are mentioned, please give their equivalent in SI.

Essential Title Page Information

- **Title.** Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.
- **Author names and affiliations.** Where the family name may be ambiguous (e.g., a double name), please indicate this clearly. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lowercase superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name, and, if available, the e-mail address of each author.
- **Corresponding author.** Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. **Ensure that telephone and fax numbers (with country and area code) are provided in addition to the e-mail address and the complete postal address. Contact details must be kept up to date by the corresponding author.**

- **Present/permanent address.** If an author has moved since the work described in the article was done, or was visiting at the time, a "Present address" (or "Permanent address") may be indicated as a footnote to that author's name. The address at which the author actually did the work must be retained as the main, affiliation address. Superscript Arabic numerals are used for such footnotes.
